DIGITAL LITERACY

PROJECT REPORT

Name: Yashwant Ravindra Sonawane
Reg No: 25BAI10061
Branch: B.Tech CSE (AI & ML)
Year: 2025-29
Course Code: CSE0001
Date: 29-03-2026

Introduction: Project Overview and Scenario.

Being a new digital citizen, I was appointed as an official Student Digital Ambassador at my college, so my main task is to help my colleagues navigate the digital environment in a productive and efficient way, safely, and professionally to showcase my own digital literacy skills. I have created a full-fledged Digital Literacy Portfolio on GitHub to assist my batchmates with their digital experience and demonstrate my professional and safe usage of digital spaces.

The project will consist of five separate tasks that will correspond to one of the core modules of Digital Literacy course.

Task 1: Infographic- I created an illustrative tool to determine what digital literacy is and what tools and safe practices students should be aware of.

Task 2: Digital Portfolio - I created a professional relationship on the Internet by creating base accounts on such platforms as GitHub and LinkedIn.

Task 3: Platforms -I showcased my technical and collaborative capabilities by working through a coding challenge and the development of a digital literacy quiz through Google Forms.

Task 4: Email Etiquette - I wrote professional emails regarding both academic and career-related issues and created a guide on Social Media Do's and Don'ts.

Task 5: Cybercrime - I have investigated a particular cyber threat and have developed a concrete action prevention checklist to assist my peers in staying safe over the Internet in India.

Through undertaking them, I have not only created a professional repository but also honed the talent to lead people to responsible digital citizenship.

Task 1 Write-up:

Design Tool and Visual Summarizing.
In this task, I utilized Canva to make a professional infographic that is centered on three main areas of interest, which are Digital Literacy, Safe Internet Practices, and Email Etiquette.

The Digital Literacy design states the capacity to locate, analyze and distribute information safely first. The second part includes practical security suggestions, including MFA and password managers in order to secure personal data. The last part is the Email Etiquette which talks about the importance of clear subject lines and the need to proofread in order to have a professional image on the internet.

The Creative Process:
An interesting fact that I learned in the process of making this was Visual Hierarchy. Being a CSE student, I used to think logically, but this project made me consider how to utilize icons and bold text in order to be able to make technical information easy to understand by any individual. It was a terrific technical knowledge blended with accessible design experience, as it demonstrated to me the significance of UI/UX in passing the message of digital safety.

Task 2 Write-up:

Choice and Strategy of the platform.
Three key tools, which included GitHub, Kaggle, and Stack Overflow, were used in this project. GitHub is a version control server which is used to store and share my code. Kaggle is a specialty community in the field of data science that is utilized to access datasets and practice machine learning models. Stack Overflow is the largest developers-only Q&A site on the world, where people can solve complex bugs in their code and discuss their problems with the rest of the world.

Four-Year Plan:
These platforms will be used strategically as a CSE AI/ML student during my degree. On GitHub, I will create a professional portfolio by writing up all the projects, starting with a basic Python script up to the final-year capstone. I will also be engaged in the AI competitions on Kaggle to advance to the next level of a beginner to a Master rank, which is essential since it will help me demonstrate my data proficiency to my future employers. On the Stack Overflow, I will switch to posting simple questions and begin to post answers as I learn to use more complex frameworks such as TensorFlow. These instruments will combinedly enable me to close the divide between the theory taught in the classroom and the knowledge industry-wise, keeping me abreast with the rapidly evolving world of Artificial Intelligence.

Task 3 Write-up:

Practice Report and Platform.
To accomplish this project, I used HackerRank and Google Forms to develop my technical pillars and record my development.

In the HackerRank, I concentrated on Python code writing and simple Problem-Solving. Being a student of AI/ML, I should master Python as the main focus of my language, it is the most important language in data science. I was able to work on clean code, loops, and data structures such as lists and dictionaries. These activities assisted me to close the divide between theory and practice.

I created structured assessments and gathered data with the help of Google Forms. This enabled me to exercise Data Collection that is the initial stage of any Machine Learning pipeline. The ability to arrange the information into spreadsheets with the help of forms is one of the crucial skills of future projects that require the analysis of data.

Academic Benefits:
These applications will be a great aid in my education. HackerRank also equips me with technical interviews and competitive programming, which are a prerequisite to placements. At the same time, Google Forms helps me to learn that data integrity and organization are crucial. The combination of them aids in shaping a disciplined attitude towards code and data management and makes me well-prepared to work with more complex AI models that I will create in the next couple of years.

Task 4 Write-up:

The Reuters email storm in 2014 is a classic representation of a bad example of digital communication. A worker has mishandled a message to a worldwide distribution list and rather than not responding to it, thousands of his workmates clicked on Reply All to whine or request to be taken off the list. This gigantic wave of emails flooded the email servers of this company leading to the crash of email and delaying important news delivery.

What might have been done otherwise:
Communication wise, the employees ought to have observed simple Email Etiquette, and remain silent instead of responding to the error. The IT department might have limited Reply All privileges on large groups, technically. This example demonstrates that insufficient digital literacy such as the inability to understand when to Mute a thread is even more harmful to an organization than a technical failure or a virus.

Task 5 Write-up:

The Reuters email storm in 2014 is a classic representation of a bad example of digital communication. A worker has mishandled a message to a worldwide distribution list and rather than not responding to it, thousands of his workmates clicked on Reply All to whine or request to be taken off the list. This gigantic wave of emails flooded the email servers of this company leading to the crash of email and delaying important news delivery.

What might have been done otherwise:
Communication wise, the employees ought to have observed simple Email Etiquette, and remain silent instead of responding to the error. The IT department might have limited Reply All privileges on large groups, technically. This example demonstrates that insufficient digital literacy such as the inability to understand when to Mute a thread is even more harmful to an organization than a technical failure or a virus.

Conclusion: Final Project Learning.

The work on this Digital Literacy Portfolio has been a transformative experience providing the transition between the simple use of the Internet and being a professional digital citizen. Being a Student Digital Ambassador has made me change my approach to digital content as a passive consumer towards being an active, responsible producer and mentor. This project enabled me to learn the necessary tools - starting with GitHub as an engine of version control up to Canva as a visual communication tool, which would make my entry in the professional environment both safe and effective.

The greatest lesson learnt during this project was that being digitally literate also involves being responsible and safe rather than being technically skilled. By studying cybercrime prevention and learning professional email etiquette, I have learned to be disciplined when interacting online and this will be very crucial during my time in the engineering degree. After all, this repository is a permanent reminder of my capacity to negotiate the challenges of the digital world and help my peers to negotiate them as well.

References

In order to finish Digital Literacy Portfolio, the following is the list of used tools, platforms, and resources that were employed in performing the five tasks as per the project brief:

Designing Presentation tools (Task 1)

- Canva: This application was used to create the infographic on professional awareness.
- Visual Hierarchy Principles: This is implemented to enhance the UI/UX of technical information.

Professional Products and Social sites (Task 2)

- GitHub: The repository of the project was hosted there and a professional profile README was created.
- LinkedIn: It is used to establish an academic network and a professional one.
- Kaggle: Selected as the platform of future data science and AI/ML development.
- Stack Overflow: It is a developer community-based platform, but it is also designed to solve technical problems.

Technical/ Collaboration tools (Task 3)

- HackerRank: Web site of practice and challenge Python coding issues.
- Google Form: The tool that was utilized to create the Digital Literacy Awareness Quiz, as well as to gather the data.

Communication and Research (Task 4 and 5)

- National Cyber Crime Portal (cybercrime.gov.in): was used as a source of information about the reporting and safety measures.
- Cyber Crime Helpline (1930): The official 24x7 emergency contact in the case of financial fraud.
- Reuters Email Storm Case Study: This is cited as a historical case of inappropriate digital communication etiquette.
